

**WITH CYBERKNIFE® , WE'VE BEEN FIGHTING CANCER ANYWHERE
IN THE BODY—FOR EVERYONE IN THE REGION—SINCE 2005.**

To discover the advantages of CyberKnife®, visit utmedicalcenter.org

It looks harmless enough, but it's one of our advanced weapons for battling cancer. The **CyberKnife® Radiosurgery System** uses highly accurate, targeted beams of radiation to treat cancerous tumors. Unlike the Gamma Knife® technology, **CyberKnife** can treat these tumors not only in the brain, but anywhere in the body and it does not require a rigid metal frame to be attached to the patient's head. With a reduced chance of complications, it's an option when surgery is too risky for certain patients. It's non-invasive and patients can usually resume normal activities the same day. We're proud to say that we brought **CyberKnife** to our Cancer Institute six years ago and have used it in over 2,000 treatments for one simple reason: it works.
